Security Risk Assessment

Powered by Google Cloud

Google SecOps Enablement Workshop

Identify critical blind spots in your hybrid environment with a fully funded expert workshop.

As your infrastructure evolves across on-prem, cloud, and remote endpoints, visibility gaps inevitably widen. You cannot protect what you cannot see. Foresite, in partnership with Google Cloud, offers a complimentary Threat Assessment Workshop designed to stress-test your current security posture against modern attack vectors. This isn't just a checklist—it is a strategic blueprint for maturing your defenses.

Google Security Operations

Visibility is the Enemy of Risk

Rapid digital transformation often leaves security behind.

Whether you are managing complex cloud environments, legacy on-premise infrastructure, or a hybrid of both, "unknown unknowns" are your biggest liability.

Are your SIEM rules optimized for the latest threats?

Do you have blind spots in your cloud configuration?

Is your remote workforce introducing unmanaged risk?

How We Deliver

ASO MATURITY DISCOVERY

(CD/CR-aligned)

Rapid baseline across people, process, tech; prioritized gaps and quick wins.

HANDS-ON WORKSHOPS

Whiteboards, demos, and labs mapped to your environment and use cases (foundational → advanced).

OPTIONAL CYBER RANGE

Live, controlled incident scenarios to build confidence and readiness with Google SecOps.

Real-World Security Outcomes

Build SecOps capability at Google scale.

Detection & Response Acceleration

Reduce MTTD and MTTR with tuned detections, faster investigations, and automated playbooks

Executive Visibility

Deliver maturity snapshots and performance metrics to demonstrate measurable program value

Operational Resilience

Adopt an ASO-aligned operating model that scales with your environment and threat landscape

Continuous Improvement

Integrate threat intel and automation for ongoing SecOps optimization

SOC Efficiency

Standardize workflows, playbooks, and use cases to cut alert fatigue and boost analyst focus

Comprehensive Scope, Actionable Insight

Aligned with the MITRE ATT&CK framework, our security architects analyze your environment to uncover risks across:

SOC & SIEM Health

Evaluating your current logging, rule sets, and detection capabilities.

Cloud Security Posture

Identifying misconfigurations and vulnerabilities in your multi-cloud environment.

Endpoint & Remote Workforce

Assessing tool deployment and configuration for dispersed teams.

SaaS & Third Party Risk

Reviewing auditing controls and threat intelligence application.

MITRE ATT&CK Coverage

Mapping your defenses against known adversary tactics.

What You'll Receive

We don't just leave you with a list of problems; we provide:

ASO Maturity Snapshot

Prioritized findings and CD/CR alignment tailored to your organization's maturity level

Detailed Threat Assessment

categorizing findings by urgency (Critical, High, Medium, Low)

Enablement Report

Detection coverage map, tuning backlog, and a 30-60-90 adoption plan

Long-Term Security Strategy

A clear path to 24/7 Detection and Response

Prerequisites

A baseline understanding of your environment—including tooling, log sources, identity model, and target use cases—is recommended.

Optional: A brief threat-modeling module can be added to identify critical assets and ATT&CK coverage before the workshop, following industry-standard STRIDE discovery practices.

Funding & Commercials

The workshop is eligible for Google Partner Funds. A scoping call will confirm coverage and identify any additional add-ons (cyber range, POV, SecOps Workshops, Migrations)

Stop Guessing. Start Knowing.

Take advantage of this Google-funded opportunity to audit your environment with Foresite's expert team.
